Community Token Whitepaper

Pre-launch v0.1 · 2026.11.19

Satoshi Nakamoto is an independent community tribute. This pre-launch edition documents the proposed trading tax, BTC distribution and buyback vault.

Origins

Satoshi Nakamoto published the Bitcoin whitepaper in 2008. In 2026 a Binance post recalled the anniversary of satoshi registering on BitcoinTalk. That history inspired this project and its genesis archive.

The community independently runs this project. The archive cites the public Binance post as a historical reference.

Trading tax and allocation

The proposed tax is 3% on buys and 3% on sells. The design allocates 70% of collected tax to BTC holder distributions and 30% to the vault.

For example, a taxable trade of 10,000 units would generate 300 units of tax. Of these, 210 units would be allocated to BTC distributions and 90 units to the vault. The example illustrates the allocation of tax revenue.

Holding threshold and BTC distributions

Addresses holding at least 1,000,000 project tokens are proposed to qualify for BTC distributions.

The on-chain reward asset, settlement method, snapshot timing and distribution records will be documented after launch. An individual payout cannot yet be calculated.

Buybacks, burns and referrals

The proposed vault receives 30% of tax revenue for buybacks, burns and the referral mechanism. The planned automated follow-up interval is five seconds. Execution depends on the contract triggers and available funds.

The launch edition will document the internal split, referral rules, buyback budget and triggers. Vault addresses, buyback transactions and burn records will allow readers to verify execution.

Launch disclosures and revisions

v0.1 · 19 November 2026. The network, ticker, contract address, supply and trading links are pending publication.

The post-launch revision will identify the full address, explorer links, distribution asset, final parameters and revision date. Project updates will be available in the launch bulletin, QQ groups and DeBox community.
